

PROTECTING OUR MOST VALUABLE RESOURCE – OUR CHILDREN

We invite you to join us for a free community event to learn about the effect of HPV infection on our children. The evening will include the documentary *Someone You Love: The HPV Epidemic*, narrated by Vanessa Williams, and a panel discussion.

Wednesday, May 6 | 5-8 p.m.

H&R Block City Stage
Union Station
30 West Pershing Road
Kansas City, MO 64108

Parking is available on the first level of Union Station West Yards Parking for \$5.

Preventing future cancers with HPV vaccine

The HPV vaccine prevents cancer and other diseases caused by the human papillomavirus, the most common sexually transmitted infection in the United States. About 80 percent of adults are infected with HPV at some point in their lives.

Protect your children from future cancers by vaccinating them now. Learn a few key facts about HPV:

- About 14 million people, including teens, are infected with HPV each year.
- Vaccination is recommended for adolescents starting at ages 11-12 years. If your child has not started or finished the HPV vaccine series, talk to your doctor.

Children must receive all three doses of the HPV vaccine to ensure full protection. Talk to your doctor to learn more.

For more information, and driving directions to the event, visit kucancercenter.org/hpv.

Panel discussion featuring:

Melinda Wharton, MD, MPH

Centers for Disease Control and Prevention

Terry Tsue, MD, FACS

The University of Kansas Cancer Center

Meagan Caron and Neal Jones

Cancer survivors
