

HPV Cancer Prevention

HPV VACCINE IS CANCER PREVENTION

HPV vaccine protects against HPV types that most commonly cause anal, cervical, oropharyngeal, penile, vaginal, and vulvar cancers.

1

Every year in the U.S., 27,000 people get cancer caused by HPV.

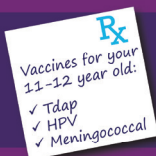

That's 1 person every 20 minutes of every day, all year long.

Most of these cancers can be prevented by HPV vaccine.

HPV VACCINE IS RECOMMENDED AT THE SAME TIME AS OTHER TEEN VACCINES

2

Preteens need three vaccines at 11 or 12. They protect against whooping cough, cancers caused by HPV, and meningitis.

HPV VACCINE IS BEST AT 11-12 YEARS

Preteens have a higher immune response to HPV vaccine than older teens.

3

While there is very little risk of exposure to HPV before age 13, the risk of exposure increases thereafter.

Vaccinate your 11-12 year olds.
