

Getting Started

This is an aid to help increase the MenACWY vaccination rates in Kansas.

STEP 1:

Establish a Baseline

Using **KS Web IZ** or other electronic health record or registry system, determine a baseline immunization rate for your organization.

Know Your Rates.

STEP 2:

Set Goals and Train your Team

Adopt the IKC **Call to Change** goals – Healthy People 2030 goal of 80% of adolescence (ages 13-15) vaccinated by 2030. Post your organizational goals internally to facilitate shared accountability.

Provide training to engage your staff – **Developing an Immunization Culture** resource is a great resource ensure everyone is on the same page on immunizing against Meningococcal disease.

STEP 3:

Select your Intervention

Intervention include of the following:

Develop and adopt **standing orders**.

Set up Reminder/Recall Systems.

STEP 4:

Work toward Improving Vaccination Rates

Follow **ACIP Recommendations for Vaccinations**.

Adopt any or all of the **10 Ways to Improve Adolescent Immunization Rates**.

Implement selected intervention(s).

Engage with front-line staff to begin the conversation when patients enter your doors (e.g. for adolescents, provide educational information about meningitis and meningococcal vaccinations).

STEP 5:

Measure and Celebrate your Improvement Success

Know Your Rates.

Utilize **KS Web IZ** or your organization's Electronic Health Record to capture progress over baseline.

VFC providers can utilize the **Assessment, Feedback, Incentives, and eXchange (AFIX) program**.

Consider utilization of the **Comprehensive Clinic Assessment Software Application (CoCASA)**.

Communicate results concurrently with staff.

STEP 6:

Adjust your Approach to Continue progress toward Achieving Established Goals

Consider progress made based on measurements of success, what could be done differently and what is working well.

Repeat Steps 2-6 until desired performance is achieved.

Vaccine Hesitant Parents

Vaccines have been shown to safely and effectively prevent the spread of disease, yet people are still hesitant about using them. The following are common barriers to why people don't vaccinate. Under them are some resources available to help people overcome these barriers. If a parent or patient has concerns about a vaccine, listen respectfully, clarify their concern, then discuss the vaccine in a nonjudgmental way, seeking to address their concerns.

Fear & Anxiety

This category includes phobia of needles, anxiety about receiving the vaccination, and the fear of the pain associated with the vaccination.
