

## New Video Series from Immunize Kansas Coalition Answers Parents' Vaccine Questions

The Immunize Kansas Coalition is excited to share the launch of their [‘Ask the Doctor’ video series](#), kicking off with the first set of videos featuring Kansas pediatrician, Gretchen Homan, MD. FAAP. This initial series consists of four short-format videos designed for platforms like Instagram, Facebook, and YouTube. In response to ongoing misinformation and a continuing measles outbreak, Dr. Homan addresses real questions that parents are asking. The videos tackle the following questions related to measles, the MMR vaccine, and vaccine safety.

- [“I’ve heard measles is ‘just a rash.’ Why should we get vaccinated?”](#)
- [“Why are there more vaccines on the schedule now than there used to be? Are all of the ingredients safe?”](#)
- [“Do vitamin A supplements help prevent measles?”](#)
- [“I have an infant under 12 months. Can my child get an early dose of the MMR vaccine?”](#)

The [‘Ask the Doctor’ series](#) is a new tool in your toolbox – perfect for sharing with parents or the public! Looking for additional measles resources? Check out their [Measles/MMR resource](#) hub for the [social media toolkit](#), [flyers](#), vaccine information, and more.
